STOP using penetrating wall anchors

GO with Waterproof Wall Anchors

If you are including a luxurious tile shower in your bathroom renovation or build, there is an important cautionary tale to tell that protects you from disappointment, potential health concerns, and investment losses. Building tile showers correctly requires much more than just installing beautiful tiles. Though tile is a durable, hard surface with water-resistant characteristics, it requires a highly-skilled installation process that integrates vital and effective waterproofing in order to prevent water-based damage from occurring. These processes manage and restrict how water correctly enters the space while moving toward the drain, ultimately creating a defense barrier against bacteria, which will grow and spread rapidly when waterproofing is not included or violated.

To prevent damage, proper waterproofing must occur behind the tile on the tile board. Though you can't see these systems after the tile is installed, they are designed to keep water and water vapor away from organic materials like structural wood studs and plywood. When **penetrating wall anchors** are used, they require drilling through the tile and membrane and into the interior wall cavity, allowing water to infiltrate the space. This causes wood materials to grow bacteria and decay, creating both health hazards and structural weaknesses. Suffice it to say, this is why waterproofing requires and comes with manufacturers' warranties.

Metal-mounted shower accessories like plumbing-grade shelves, hooks, grab bars, seats, hand showers, and shower doors are all products that can destroy waterproof systems. When these products are mounted using traditional **penetrating wall anchors**, they violate and void waterproofing intentions and warranties.

TileWare Products® stops these penetrations and the devastating effects of water infiltration with our patented PermaTile™ **Waterproof Wall Anchors**. Our approach is to combine anchoring with waterproofing (behind the tile) into a singular system which in turn protects the lifelong integrity of the waterproofing envelope (the space that contains and directs the flow of water to the drain). Our PermaTile™ anchors were designed to mate with our minimally-designed accessory products (illustrated in this Product Guide), which are easily installed. Our methods not only ensure proper waterproofing but, once our accessories are mounted, they are simply stronger. In addition, over the past 12 years, we have substantiated that our mounts will never loosen or pull away from your tile surfaces. By including our products in your tile shower, you will enjoy a well-organized space that features outrageous strength and reliability while having peace of mind that your investment is protected.

We are excited and grateful for your engagement with PermaTile™ anchoring.

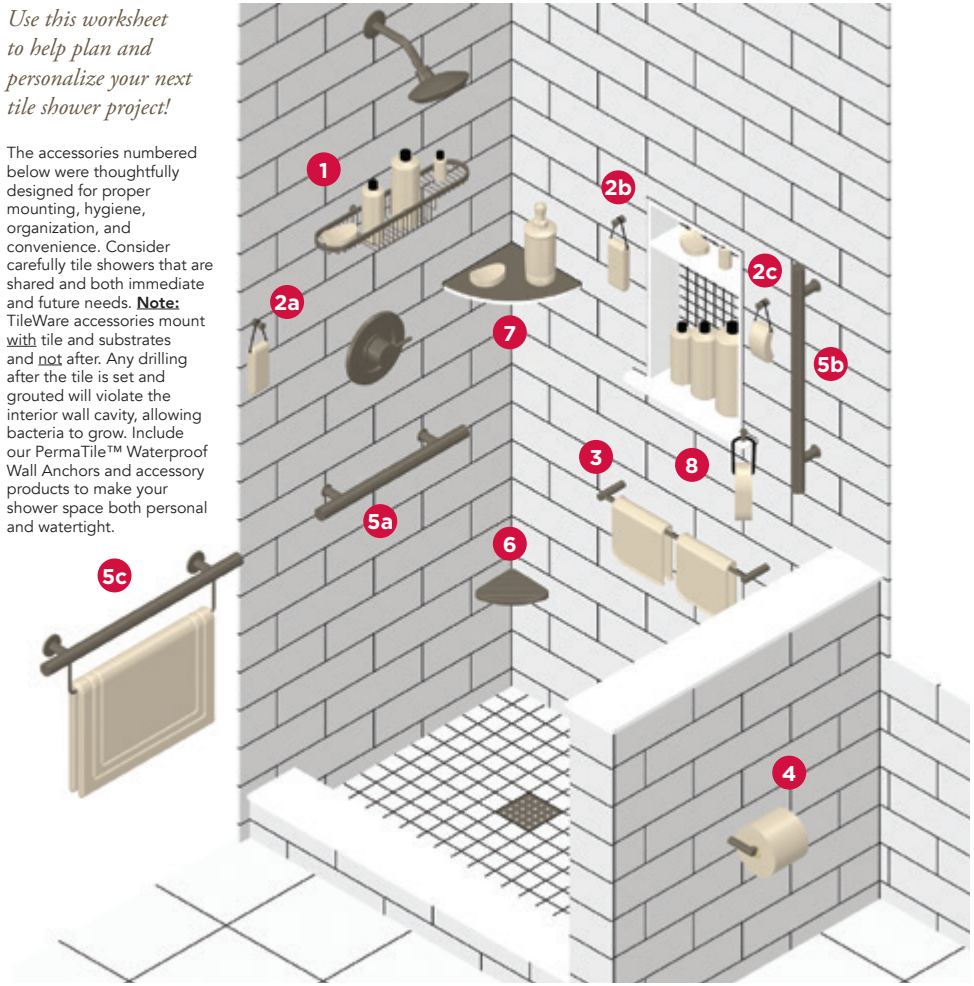
Shower Accessory Worksheet

Use this worksheet to help plan and personalize your next tile shower project!

The accessories numbered below were thoughtfully designed for proper mounting, hygiene, organization, and convenience. Consider carefully tile showers that are shared and both immediate and future needs. **Note:** TileWare accessories mount with tile and substrates and not after. Any drilling after the tile is set and grouted will violate the interior wall cavity, allowing bacteria to grow. Include our PermaTile™ Waterproof Wall Anchors and accessory products to make your shower space both personal and watertight.



1. Opened basket storage, positioned above/below the shower lever. Offered in multiple sizes & depths 4-10
2. Hang loofahs, poofs, & scrubbers inside or position robes & body towels outside..... 11-13
3. Drip-dry washcloths or arrange mats and body towels for immediate access 14
4. Mount toilet paper holder on wainscot tile for a mounting that will not fail 15
5. Multipurpose/minimalist ADA grab bars for assistance or hanging body towels..... 16-22
6. Anti-slip foot prop for leg shaving or washing lower extremities 23
7. Pre-sloped Claddy-T™ shelf marries glass & metal for a unique style & storage solution..... 24-25
8. Refer to our Boundless™ Series Product Guide for more accessory & surface features for tile showers

Note: All of our metal accessories have precise mounting solutions for both tile and gypsum wallboard (drywall).

PermaTile™ Series

Rough-In Tile Wall Anchors

Always keep your tile project moving with Rough-In!

Anchoring Features and Benefits:

1. Anchors that Never Fail
2. Super Strong – Like Rebar in Cement
3. Stainless Construction – Will Not Rust
4. Stops Unwarranted Hole Drilling
5. Protects Waterproofing Systems
6. Professional Anchoring Technology
7. Tile Exclusive System
8. Easy to Install & Maintenance Free
9. Tested by the TCNA
10. Installs with Machine Screws NOT Wood Screws

Secure™ Series

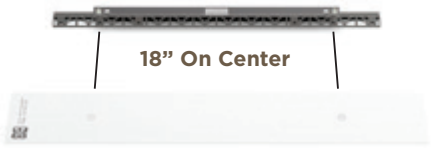
Waterproofing Membranes

Waterproof wall anchoring w/ bonded shower systems

Waterproofing Features and Benefits:

1. Works with Foam, Sheet, or Liquid
2. Install with A118.4 or A118.15 thinset
3. One piece install with rubberized collars
4. Waterproofs with 'Z' anchor mountings

Combine WG100-509 with PT100-509



This product works similarly to other waterproofing banding and seal tape products. Use only tile-specific waterproof membranes with an embedded non-woven fleece fiber. Use a 1/4" x 3/16" V-notch towel (or similar). Press TileWare's waterproofing gasket into thinset and substrate using the flat side of a trowel or a 6" taping knife. (Please refer to instruction instructions before installing)

Kit Color Codes

Packaging codes apply to all product categories

T — Complete Kit

Tile Thickness Range 5/32"– 1/2" (4mm – 13mm)

Kit includes: (1) PermaTile™ Rough-In Anchor with all the trim & screw components necessary to complete one tile installation

Pictured: T101-211-PC

TX — Trim Only Kit

Tile Thickness Range 5/32"– 1/2" (4mm – 13mm)

Kit includes: trim & screw components (only) for one tile installation. Mating PermaTile™ Rough-In Anchor packed and sold separately

Pictured: TX101-211-ORB

PT — Rough-In Only Kit

Tile Thickness Range 5/32"– 1/2" (4mm – 13mm)

Kit includes: (1) PermaTile™ Rough-In Anchor (only) for one tile installation. Mating trim & screw components packed and sold separately

Pictured: PT100-507

WG — Membrane Only

Tile Thickness Range 5/32"– 1/2" (4mm – 13mm)

Kit includes: (1) Waterproofing membrane (only) for one tile installation. Mating trim & screw components (TX) and/or PermaTile™ Rough-In Anchor (PT) are packed and sold separately

Pictured: WG100-509

G — Complete Kit

Gypsum Wallboard Surfaces 1/2" or 5/8" (Attaches to blocking)

Kit includes: Anchor/s with all the trim & screw components necessary to complete one gypsum wallboard (drywall) installation

This chart explains how TileWare works with your tile shower materials

1 Material Categories		2 Points to Learn About	3 Important Selection and Installation Details
ALWAYS SELECT TILE & ACCESSORIES TOGETHER	Tile	Tile Thicknesses	PermaTile™ Rough-In Anchors generally work with tile thicknesses from 5/32" to 1/2" (4mm – 13mm).
		Tile Anchoring Locations	Anchors can be located in the grout joint or drilled into the tile body.
	Accessories	Organization: Baskets and Shelving	Both single and corner wall baskets are available. Great for salon containers and bar soaps. Position above or below the shower valve trim without violating waterproofing or plumbing. As an additional solution, use in applications where the structure prohibits niches or on masonry walls.
		Organization: Hooks	Organize anything that hangs with a rope: soaps, poufs, scrubbers, sponges, loofahs, body brushes, robes, squeegees, towels and washcloths, shower caps, toys and clothing. Great in conjunction with niches.
		Organization: Towel Bars	Organize washcloths inside the shower or bath mats and towels outside the shower. Great in conjunction with niches.
		Organization: Claddy-T™ Corner Shelving	Metal corner shelving with colored fused glass. 11 pre-sized glass tile colors available. Can also install natural stone, porcelain and ceramic (even mosaics) in the metal tray. Pre-sloped for drainage and lugged for grout spacing.
		Accessibility: Grab Bars	ADA compliant grab bars that don't look institutional. Minimal design with small escutcheons and wall terminations. Can position straight models horizontally, diagonally or vertically. Curved grab bars also available to assist with sitting and standing where a seat is needed.
		Accessibility: Foot Prop	Assistive foot rest for shaving legs and washing lower extremities. Includes low profile treads for slip resistance. Great for use in the hospitality industry.
USE THE RIGHT METHODS, MATERIALS & WATERPROOFING	Thinset, Timing & Tools	General Accessory PermaTile™ Rough-In Anchors	General accessory Rough-In Anchors, made from stainless steel. Engineered to install on top of waterproofed substrates. Anchors are positioned and installed behind tile in A118.4 or A118.15 thinset adhesives.
		Grab Bars PermaTile™ Rough-In 'Z' Anchors	Grab Bar Rough-In 'Z' Anchors, made from stainless steel. Engineered to install with tile substrates. After waterproofing, install tile using A118.4 or A118.15 thinset adhesives.
		Drilling	With general accessory anchors and when installing grab bars with small format tiles, use a 3/8" or 10mm diamond core bit to drill the hole/s necessary to accommodate Rough-In Anchors. For large format tiles, we provide a cover-washer option for grab bars that allows up to a 3/4" or 20mm diamond core bit so thinset ridges can be collapsed.
		Mounting Accessories/ Trim	Before mounting accessories on tile surfaces, Rough-In Anchors must cure in thinset for 24 hours. Accessories can be immediately installed after grouting.
	Waterproofing	Foam-core Systems	PermaTile™ Rough-In 'Z' Anchor needs to be attached to wood or metal studs in 2 locations. Rough-In 'Z' Anchors will waterproof with foam-core bonded shower systems or approved polyurethane-based adhesive sealant systems.Tile is then installed on top of waterproofed system using A118.4 or A118.15 thinset adhesives.
		Sheet Membrane Systems	PermaTile™ Rough-In 'Z' Anchor needs to be attached to wood or metal studs in 2 locations. Rough-In 'Z' Anchors will waterproof with (thinset applied) sheet membrane systems. Tile is then installed on top of waterproofed system using A118.4 or A118.15 thinset adhesives.
		Liquid Membrane Systems	PermaTile™ Rough-In 'Z' Anchor needs to be attached to wood or metal studs in 2 locations. Rough-In 'Z' Anchors will waterproof with liquid applied membrane systems that have the capacity to adhere to stainless steel. Tile is then installed on top of waterproofed system using A118.4 or A118.15 thinset adhesives.
		Waterproofing Weld Projections	Use TileWare's Secure™ Waterproof Gaskets with rubberized flexible collars to create a seamless and watertight connection over weld projections. Gasket models are equipped with (2) holes that will match the separation between projections. Bond gaskets to waterproof substrates using A118.4 or A118.15 thinset adhesives.
